MTEC 1102 Ins and Outs

11 November 2019

Final Project

The idea of this project is that Brandon Castillo and Christopher Medina will work together in a group to recreate a connect 4 game using Arduino. Using if statements combined with other conditionals and visuals to recreate the game of connect 4. With a touch screen, we can give off the feel of a digital connect 4 game. The winner will have a little celebration will sound and LED lights that will go off. While the game is happening there will be music playing through the speaker and a second speaker will make two different noises for each player and there will be LEDs to show who's turn it is at the moment.
